This was tried as both an add on to Proin ER and a stand alone without any difference. While it may not be an accurate reflection of the product due to the patient it was tried on, the pet would not eat this product and had to be pillled. The test subject was not ideal, so I would be willing to try again on a more typical patient for which the product was designed.

The pet that this was first on is very hard to get to take any medications. She took the chew easily the first couple days but then stopped taking it. This is a dog that has went through urinary incontinence since she was a young pup. Has been on Proin for most of her life. Figured it was worth a try, unfortunately the pet did not agree.
